*We design passenger vessels that are not only beautiful, but also safe and efficient to operate for maximum profitability for owners.*

As a full-service naval architecture firm, we work directly with customers to create passenger vessels that meet their unique requirements and performance objectives. We pay particular attention to aesthetics and hull design, sea-keeping, boat operation, ease of docking, fuel conservation and the ability for passengers to embark and disembark quickly and safely, all of which help customers save money and maximize returns.

We provide expert engineering and design plans for refurbishing and repowering older assets, conducting stability assessments and complying with new U.S. Coast Guard and ADA regulations. And we work closely with shipyards to ensure design integrity and cost efficiency.

Jensen customers also benefit from our association with our parent company, Crowley, the largest privately held U.S. maritime company. Crowley, former owner of San Francisco's famed Red & White Fleet and Southern California's Catalina Cruises, gives Jensen unmatched knowledge of passenger vessel operations as well as access to the resources and backing of one of the most respected names in the maritime industry.

As an active associate member in the Passenger Vessel Association (PVA), we work very diligently to help members solve problems and improve their performance.

We are full service from preliminary concept through as-built phases:

- Preliminary Design
- Contract Design
- Detailed Design
- Retrofit / As-Built
- Refurb / Repower

### Passenger Vessel Services:

- New Vessel Designs
- Vessel Repair and Refurbishments
- Feasibility Studies
- Detailed Engineering
- Green Design
- Fuel Saving Studies
- Regulatory Assessment and Liaison
- Designs Incorporating Americans with Disabilities Act (ADA) Regulations
- Structural Fire Protection Design
