- Offshore Supply Vessels
- Dredges
- Fireboats
- Crane Barges
- Work Platforms
- Oil Barges
- Deck Barges

We design boats that work and that are optimized for efficiency, resulting in savings and higher revenues for the operator.

As a designer of fishing boats, fireboats, ferries, tugs and more, Jensen has the technical experience and the flexibility to do it all. Our first tractor tug design (Tug Z) in the early 1990s earned us the nickname “Little Tugboat Giant.” And giant-sized expertise is what we offer. As a full-service naval architecture firm, Jensen designs workboats that will perform anywhere, from the shallowest rivers to the deepest oceans - anything from 55-foot push boats to 225-foot anchor-handling tugs and all types of vessels in between.

Our association with Crowley, the largest, privately-held U.S. maritime company, gives Jensen unmatched knowledge of the workboat industry and access to the resources and backing of one of the most respected names in the maritime industry.

Because Crowley owns, operates, manages, and supervises construction of various sized workboats and barges, Jensen now has key insights from a vessel operator with over 117 years of maritime experience. We know what designs actually work and how vessels are used most efficiently and cost effectively. We take pride in designing “buildable and operable” tugs – something the

competition often misses. After all, a boat might look good on paper, but it must deliver excellent performance while doing the job for which it was intended.

When you deal with Jensen, you’ll find that we are very flexible and easy to work with. We know one size doesn’t fit all and while you might want a new custom boat design, you might also want to use one of our proven existing designs modified to fit your specific needs.

Please contact Jensen Maritime Consultants today, at (206) 284-1274, to see how we provide the highest quality, most efficient and most innovative maritime design services anywhere in the world.

We are full service from preliminary concept through as-built phases:

- Preliminary Design
- Contract Design for Yard to Price
- Detailed Design
- Retrofit / As-Built
- Refurb / Repower
