- **Longliners**
- **Gillnetters**
- **Research Vessels**

We design fishing vessels that are not only beautiful, but also safe and efficient to operate for maximum profitability for owners.

We built our early reputation one fishing vessel at a time. While we were originally known throughout the Northwest for designing “functionally elegant” vessels of all sizes that were distinguished by their endurance and an ability to stand up to anything the rough waters of the North Pacific could dish out, today we’ve set the standard for the entire commercial fishing industry.

Commercial fishermen operate in one of the world’s harshest environments. They work in

isolated fishing grounds, and endure hazardous working conditions that can have a major impact on safety, like high winds, darkness, freezing seas, icing and long days. It’s easy to see why a vessel that’s anything less than 100% reliable is completely unacceptable. For over half a century, fishermen from Alaska to California and Maine to Texas have turned to us to safeguard their livelihoods and the lives of their crew.

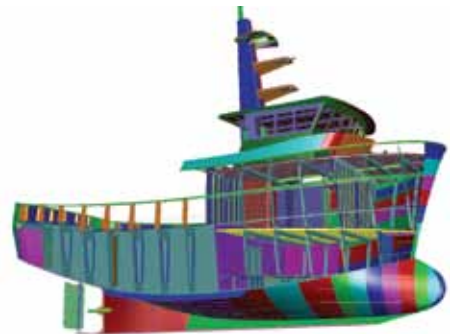

We are full service from preliminary concept through as-built phases:

- Preliminary Design
- Contract Design
- Detailed Design
- Retrofit /As-Built
- Refurb /Repower

Fishing Vessel Services Include:

- Stability
- Regulatory Compliance
- Feasibility Studies
- Vessel Conversions
- Shipyard Support
- Production Engineering and Lofting
- Tonnage
- Diesel Electric Power Studies
