

Interception of *Trogoderma granarium* in Personal Effects from Pakistan

The Miami Agriculture Task Force intercepted *Trogoderma granarium* in a shipment of *Cicer* sp. and *Oryza* sp. from Pakistan and destined to Colombia. The shipment was manifested as personal effects. Khapra beetle is an extremely destructive grain pest not known to occur in the United States. Infestations can result in up to 70 percent grain damage, making grain and grain products inedible and unmarketable.
