

TWB-06020

60' x 20' Workboat

This 60' x 20' vessel was designed to meet requirements for a multi-purpose harbor workboat. The vessel can support salvage, dive operations, and light ice breaking work as well as general harbor work including security patrols. The vessel is a single screw, single chine steel hull, and is suitably strengthened in the box for operations in light ice.

The vessel's engine room is located amidships, with a store room, fuel tanks and the lazarette aft. A small galley/lounge area is located forward of the engine room. The deckhouse amidships includes a change room for diving support. The wheelhouse is stepped up to allow for 360 degree visibility. No crew berthing is fitted as this vessel is intended to operate solely as a day boat. Deck machinery includes a folding crane fitted with a grapple hook for use in salvage operations. A recessed diver's platform aft, cut into the main deck, supports bringing divers in and out of water.

Overall Dimensions

Length60'
